738	PGESRES100	ud Punto limpio en obra para acopio y almacén de los residuos generados en la construcción. Incluye una zona despejada para el acopio de material no peligroso así como una zona habilitada para materiales peligrosos. esta última se constituye por una estructura de chapa prefabricada de 9x3 m que supone la parte superior del almacenamiento (techo y las paredes), la parte inferior consta de una solera de hormigón, (que actuará como cubeto de retención ante posibles derrames líquidos) lo cual requiere una excavación a máquina previa de 20 cm, para colocar un encachado de piedra y una lámina de plástico, después se realizará la solera de hormigón de 15 cm de espesor con mallazo de acero, para constituir la base del almacén que deberá tener una mínima inclinación para desembocar a un sumidero sifónico de pvc, que se conectará con un tubo de pvc (con una longitud de unos 6 m) a una arqueta prefabricada también de PVC. dicha arqueta requerirá además de una fábrica de ladrillo tosco para proteger dicho elemento. el precio del almacén incluye además un cartel de identificación, un extintor de polvo abc, así como sepiolita para recoger posibles derrames líquidos pastosos (ej. grasas). inclusive la mano de obra necesaria para la colocación del cartel, el extintor, la sepiolita, así como de la lámina de plástico y tornillos que sujeten la estructura prefabricada a la solera de hormigón.	<table><tr><td>Mano de obra</td><td>288,09</td></tr><tr><td>Maquinaria</td><td>16,18</td></tr><tr><td>Resto de obra y materiales.....</td><td>2.060,00</td></tr><tr><td>Suma la partida</td><td>2.364,27</td></tr><tr><td>Costes indirectos 6%</td><td>141,86</td></tr><tr><td>TOTAL PARTIDA.....</td><td>2.506,13</td></tr></table>	Mano de obra	288,09	Maquinaria	16,18	Resto de obra y materiales.....	2.060,00	Suma la partida	2.364,27	Costes indirectos 6%	141,86	TOTAL PARTIDA.....	2.506,13

799	PIMPEXT3	m² Impermeabilización exterior de la cámara de compuertas mediante mortero elástico. Incluye los siguientes trabajos: - Preparación del soporte mediante medios manuales o mecánicos: limpieza de la superficie con agua a presión con el fin de eliminar la suciedad, restos de desencofrantes, etc. para conseguir una correcta adherencia. - Suministro y aplicación de mortero elástico Masterseal 6100 FX,o SIMILAR en el exterior de la cámara con una dotación aproximada de 3 kg/m2 y 3,0-3,5 mm de espesor medio. La aplicación se realizará de forma manual o proyectada en dos capas y sobre el soporte húmedo y limpio. Una vez aplicadas las dos capas formará una membrana superficial adherida al soporte que impide totalmente el paso del agua y de las humedades, en ambos sentidos, siendo un material que está homologado para agua potable y es compatible con hormigones y cemento Pórtland.
